Engineering  
Aalto University

# Space missions

**IF MAN SHOULD INVADE SPACE—A RACE FOR SUN, MOON, AND PLANETS AT THE TERRIFIC SPEED OF TWO MILES A MINUTE**

Man has invaded space—not in airplanes which would fall to pieces with age before Earth's near neighbors were visited, but with thoughts which travel faster and work more miracles even than the light of the sun. Standing on his own tiny planet, an infinitesimal atom in a boundless universe, he can with cunningly contrived pieces of glass bring many thousands of other worlds to him, and make them tell him their story. By measuring the speed of light, he can tell their distance; by splitting up their faint rays of light, he can judge of what they are made. Though they be a million times as big as he, yet standing on his little spot of earth, he can weigh them as he would weigh a pound of sugar. Keeping track of their movements, he can tell where they will be hundreds of years in the future.

# Cosmic journeys

The colored lines illustrate nearly 200 unmanned missions at 1958 - end of 2014

# From large satellites to small satellites

Based on: Sandau, Rainer; Brieß, Klaus; D'Errico, Marco (2010): „Small satellites for global coverage: Potential and limits“. In: *ISPRS Journal of Photogrammetry and Remote Sensing*. 65 (6), S. 492-504, DOI: 10.1016/j.isprsjprs.2010.09.003.

# USA and cubesats

Luna H-Map: Lunar Polar Hydrogen Mapper

IceCube

Lunar Flashlight

Skyfire

NEA Scout: Near-Earth Asteroid Scout

CuSP: CubeSat to study Solar Particles

BioSentinel

Mars Cube One (MarCO)

# Europe and cubesats

The QB50 mission will demonstrate the possibility of launching a network of 50 CubeSats built by Universities Teams all over the world as a primary payload on a low-cost launch vehicle to perform first-class science in the largely unexplored lower thermosphere.

The screenshot displays the QB50 project website. At the top left is the QB50 logo, followed by the text "QB50, an FP7 Project" and logos for the European Union and the University of Twente. On the top right, there are navigation links: "Contact | Consortium | Network | Newsletters | News". The main content area features a dark blue background with a view of Earth from space. The title "Multiple Scientific Instruments for the Analysis of the Lower Thermosphere" is centered. Below the title is a list of instruments: "- INMS (Ion/Neutral Mass Spectrometer)", "- FIPEX (Flux  $\Phi$  Probe Experiment)", and "- mNLP (multi Needle Langmuir Probe)". Two 3D models of the instruments are shown at the bottom. At the bottom left, it says "Images courtesy of MSSL and University of Oslo". A navigation bar at the bottom contains the following links: "HOME", "THE PROJECT", "PRECURSOR FLIGHT", "CUBESATS", "REVIEWS", "DOCUMENTS", "SCHEDULE", "EVENTS", and "FORUM".

# Dream of own satellite 2010

# CubeSat projects and teaching

# Satellite project connection to curriculum

- **Most of the satellite was built in Master thesis projects and special assignments**
- **The project worked together with many teachers in many disciplines**
- **The satellite project provided topics in:**
  - Space science, space technology, remote sensing, radio engineering, electronics, mechanical engineering, material sciences, software engineering and others

# Aalto new Master programmes in 2015

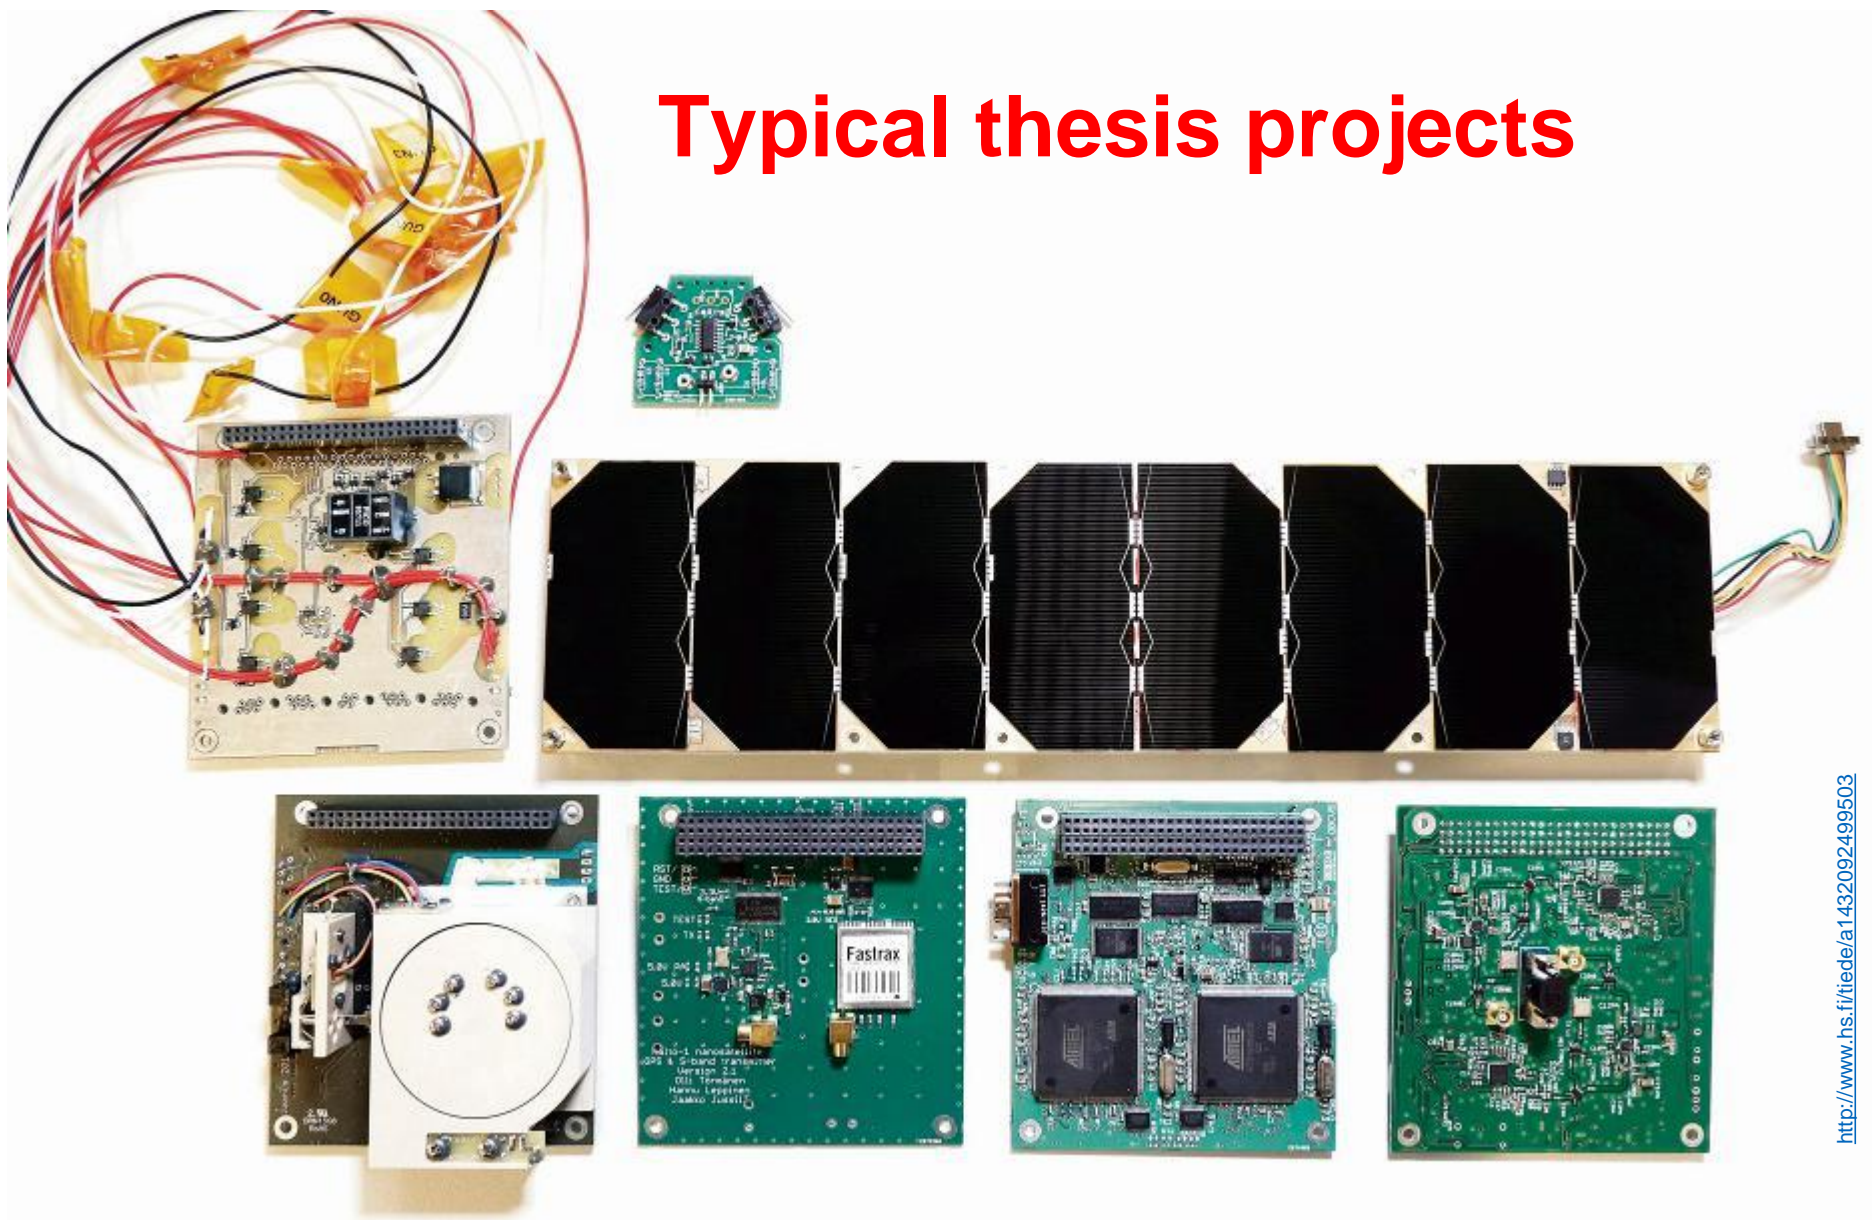

A new Master programme on **Nano and Radio Sciences** started in autumn **2015**.

- New **Space Sciences and Technology** Major.
- Tight integration with radio- and nanosciences.
- Collaboration with Joint European ERASMUS MUNDUS Space Master programme.
- Collaboration with Nordic Five Tech.

# Aalto-1

The Finnish Student Satellite

# Payloads

## AaSI (VTT)

Mass: 592 g

Power: max 2.5 W

## Plasma Brake (FMI)

Mass: 259 g

Power consumption: 1-1.6 W

1000 V high voltage generation

## RADMON (Univ. Of Turku, Univ of Helsinki)

Particle detector measuring the flux of  $>700$  keV electrons and  $>10$  MeV proton

Mass: 354 g

Power consumption: 1 W

# Aalto-1 launch

**Aalto-1 is booked to SpaceX Falcon-9**

**Launch: June 2016**

**Secondday payload contains 14  
CubeSats**

**The launch is delayed because of  
launch failure in July 2015**

**Price of the launch 240 k€**

# Aalto-1 cubesat science

- Launch: June 2016
- **Earth observation**
- **Space weather: energetic particles**

# Aalto-2 cubesat science

- Launch: Dec. 2016
- Payload: Langmuir probe
- Science:  
**Space weather / ionosphere**

# Suomi100 satellite

- **Launch: 2017**
- **Payload:**
  - **auroral camera & radio wave instrument**
  - **Science: Space weather & ionosphere**

# Possible future projects (1/2): ESA's Asteroid Impact Mission with Cubesats

- ESA's The Asteroid Impact Mission (AIM) plan
- Five cubesat proposals
- ASPECT: VTT Technical Research Centre of Finland, University of Helsinki, Aalto University
- A CubeSat equipped with a near-infrared spectrometer to assess the asteroid composition and effects of space weathering and metamorphic shock, as well as post-impact plume observations.

# Possible future projects (2/2): Pulsar-based navigation

Nanosatellites are ideal platforms for the pulsar navigation.

Based on comparing received pulsar signal time-of-arrival (TOA) with expected TOA, accurate navigation can be achieved.

Developed for X-ray and radio frequencies in several research groups.

Aalto University has been developing a radio pulsar navigation system.
